SUMMARY

Software Development Engineer with 4 years of experience in full stack development using modern technologies such as HTML, CSS, JavaScript, React, React Native, Next.js, Node, Express, Nest.js, Docker, MongoDB, and SQL. Skilled in building high-performance web applications with Web Workers, Service Workers, and IndexedDB, and AWS for scalable deployments.

EDUCATION

B.Tech, Computer Science Engineering

GGSIPU, Delhi, India

Graduated May 2022

9.1 CGPA

Ambedkar Institute of Advanced Communication Technologies and Research, Now (NSUT East Campus)

TECHNICAL SKILLS

Web Development: HTML/CSS/JS, React, Redux, Tailwind CSS, Next.JS, Node, Express, Nest JS, MongoDB, SQL, GraphQL, Vitest, Jest

Cloud & DevOps: AWS (EC2, EKS, S3), Docker, Jenkins, GitHub Actions, Husky, CI/CD Pipelines

Collaboration and Other Tools: Git, Agile development tools (JIRA, Confluence, etc), Figma, Blender

Programming Languages: JavaScript, Typescript, C++, Python

AI Engineering: RAG Systems, Claude Code, MCPs, Agent orchestration

EXPERIENCE

Fynd (Shopsense Retail Technologies Ltd.), Noida, India: Software Developer Engineer Aug 2024 – Present

- Engineered a robust **Offline POS client** leveraging IndexedDB, Service Workers, web workers, Browser's File System Access API and a custom re-sync workflow in backend — achieving full offline-first capability and reducing average order time from 1 min to 20 seconds.
- Delivered the **StoreOS** system for retail outlets in just 4 months, ensuring smooth and efficient implementation.
- Implemented extension ecosystem, using micro-frontend architecture, enabling independent feature deployment across web modules and improving developer productivity.
- Designed and implemented the **FSI (Fynd StoreOS Interface)** — a unified communication library enabling seamless interaction between Android and Web layers, as well as between host applications and embedded iframes, standardizing inter-platform communication across products.
- Set up unit testing infrastructure from scratch using Vitest, growing coverage from 0% to 55% also configured Azure Pipeline CI to enforce test gates on feature branch merges into critical version branches, ensuring no regression ships to production

Freecharge Payment Technologies Pvt. Ltd., Gurugram, India: Software Developer Engineer Jul 2022 – Aug 2024

- Implemented the core content management system, completing the project within a 6-month time-frame.
- Enhanced the primary back-end of the customer app, leading to a 20% decrease in response time.
- Launched and actively maintained some key projects such as **Merchant Business Website**, **Support Website**, and **Payment Solution Dashboard (FCPG Panel)**.
- Orchestrated the seamless transition of the Operation Panel from Angular JS to React, reducing bug occurrences by 60% and increasing overall system stability.
- Resolved a critical client issue where 90% of users were dropping off during checkout by conducting on-site debugging with real customers, identifying UI familiarity and language barriers as the root cause, and designing a customizable, multilingual payment interface within 2 days — reducing drop rate from 90% to 2%.

Freecharge Payment Technologies Pvt. Ltd., Gurugram, India: Intern - Back-end Developer Jan 2022 – Jul 2022

- Built a blog admin panel capable of handling 63K requests per minute using GraphQL.
- Conceptualized and constructed a dynamic form generator, which reduced development time up to 50%.

- Developed ***ProsperMe Greens*** website establishing an online presence for the company, with 10% increase in lead generation.
- Engineered functionalities such as reminders, lead on-boarding processes, and tracking mechanisms within the internal lead management system, to reduce overall support response time by 20%.

PROJECTS

VaultRAG — Obsidian RAG Plugin

March 2026

Obsidian plugin that brings Retrieval-Augmented Generation to your personal knowledge vault.

- Built a full RAG pipeline with token-window chunking, cosine-similarity vector search, and delta indexing — only re-embedding files modified since the last run to minimize API cost.
- Integrated OpenAI, Anthropic Claude, and local Ollama as interchangeable chat and embed providers; chat and embed backends are configured independently with no vendor lock-in.
- Delivered streaming markdown responses in Obsidian's native sidebar, persistent conversation history with auto-compaction at 50 turns, and an index dashboard with per-file status and embedding cost estimates.

Actor

December 2023 – January 2024

Developed an innovative API mocking service that can be used to for API testing and development and share API documentation.

- Engineered the fundamental back-end architecture and created reusable dashboard components for seamless front-end integration, while following best practice guidelines, with 60% unit test code coverage.
- Implemented Docker to containerize the application, enabling seamless deployment on cloud platforms; reduced deployment time by 20% and increased scalability for future growth.

OTHER WORK EXPERIENCE

MSI Power, Gurugram, India: Freelance Web Developer

March 2021 – April 2021

- Led end-to-end design and development of MSI Power's primary website, operating under direct reporting lines to the core management team for seamless execution of the project.

ACHIEVEMENTS

FC Warrior

Nov 2022 – Mar 2023

Recognized as an FC Warrior for outstanding contributions and exceptional performance in the workplace

Fynd Stars: Going Above & Beyond

September 2025

Recognized for exemplary ownership, innovation, and cross-functional collaboration in delivering mission-critical product enhancements under tight deadlines, resulting in measurable improvements in system performance and user experience
